                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence is that encoding mouse tumour necrosis factor related
ligand (TRELL). TRELL or active fragments can be included with a
carrier in pharmaceutical compositions to treat cancer, autoimmune
diseases or immune responses to tissue grafts, or to stimulate or
suppress the immune system. It is useful to screen for TRELL
receptors, by labelling with a detectable label and screening
compositions for binding. Agents interfering with TRELL-receptor
binding can also be screened for, can then be administered,
optionally with interferon- gamma, to induce cell death or
treat, suppress or alter immune responses (especially involving human
adenocarcinoma cells) involving a signal pathway between TRELL and its
receptor. The DNA sequence can be used in gene therapy for
TRELL-related disorders in mammals (especially humans), e.g. tumours,
autoimmune and inflammatory diseases or inherited genetic disorders,
by introducing into cells, and expressing, therapeutically effective
amounts of a vector, e.g. a virus comprising a gene encoding TRELL.
It may also be of use in the preparation of prepare probes for
soreening natural/synthetic DNAs for TRELL-encoding sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 11
This invention describes isolated Tumor Necrosis Factor (TNF) family receptor polypeptides: APO4, APO6, APO8 and APO9 or their active CC fragments, and isolated TNF related ligands 1 and 3 (TNRL1 and TNRL3) or their active fragments. APO4 is useful for diagnosing prostate cancer by determining levels of APO4 in an individual. Prostate cancer can also be treated using APO4 selective binding agents linked to a therapeutic molety. APO4 polypeptides are also useful for identifying selective binding agents, useful in diagnosis/treatment of disease by binding of agents to the polypeptide/active fragment which is extracellular, or expressed on the cell surface. The binding is preferably performed in Vivo. APO4 polypeptides/ active fragments are also useful for screening consists and antagonists by binding and observing the changer in APO4 activity. Effective pharmacological agents useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tumour necrosis factor receptor; signal transducer molecule; TNF; APO4 developmental abnormalitty; gestational abnormalitity; prostate cancer; APO6, APO8, APO9, TNRL-I; TNRL-3; diagnosis; treatment; therapy; disea cytoplasmic domain; immunogen; antibody preparation; breast carcinoma;

The method is performed in vivo or in vitro. APO polypeptides are all useful as immunogens for preparing antibodies. APO4 is also useful for diagnosis/treatment of developmental or gestational abnormalities. APO8 was transfected to human breast carcinoma cell line
 Homo sapiens BARD1 exon 1.

```
CC The sequence is that of containing a BARD1 exon which can be used in the CC preparation of the recombinant breast cancer antigen, BRCA1, binding CC proteins BARD1, B123, BE2, BE14, BE31 or BE445, or a composition for the CC detection of a BARD1, B123, BE2, BE14, BE31 or BE445 nucleic acid CC sequence, specifically a wild type BARD1 composition for the detection CC or purification of BRCA1, useful to identify a patient having, or at CC risk of developing cancer. BARD1 can be used in the preparation of an CC anti-BARD1 antibody, and in the detection and purification of a BRCA1 protein. BARD1, B123, BE2, BE14, BE31 or BE445 can used in the CC identification of a binding protein agonist or antagonist that alters CC the binding of BARD1, B123, BE2, BE14, BE31 or BE445 to BRCA1 or the CC biological activity of the BRCA1-BARD1, B123, BE2, BE14, BE31 or BE445 can used in the CC complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, CC BE31 or BE445, a specific anti-BARD1 antibody can be used to identify CC a patient having or at risk of developing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Percent Similarity:

This enzyme is found associated with high-density lipoproteins and Apolipoprotein-Al and -D. The gene and protein can be used to produce transgenic plants which have increased lipid metabolism and membrane fluidity, and therefore increased resistance to heat and/or cold shock, to alter the content of phytosterol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and oncogenic transformation. To isolate the clone, a yeast two-hybrid method was used to screen a mouse embryo cDNA library to identify proteins that interact with JNK. 7 Overlapping partial clones were isolated, and the full-length cDNA was subsequently obtained by screening a mouse brain lambda ZAPII cDNA library. The invention provides JIP-1 nucleic acids and polypeptides, expression vectors and host cells. The JIP-1 polypeptide and nucleic acids (including antisense and ribozyme molecules) can be used in the manufacture of a medicament for treating a pathological condition associated with abnormal expression or activity of JNK, such as a neurodegenerative disease (selected from Parklison's disease and Alzheimer's disease), a blood clot, stroke, malignarcy, leukaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This CDNA sequence codes for murine JNK-interacting protein 1 (JIP-1, see AAW61625), a novel cytoplasmic anchor protein that specifically binds to and inhibits the biological effects of JNK (C-Jun NH2-terminal kinase), including the initiation of apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       c-Jun NH2-terminal kinase (JNK)-interacting protein {\bf 1} - used to treat neurodegenerative disease, blood clot, leukaemia, autoimmu disease, and inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    an autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ŏ

Title: Perfect score: US-09-245-198A-4 1444 1 MSLLDFEISARRI.DI

BLOSUM62 Gapop 10.0 , Gapext 0.5

Sequence: MSLLDFEISARRLPLPRSLG......PWAHLKAAPFLTYFGLFQVH 284

Scoring table:

Searched: 112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0
Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt_40:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-i- SUBUNIT: HOMOTRIMER (POTENTIAL)i- SUBCELLULAR LOCATION: Type II membrane protein and secretedi- TISSUE SPECIFICITY: Highly expressed in adult heart, pancreas, skeletal muscle, brain, colon, small intestine, lung, ovary, prostate, spleen, lymph node, appendix and peripheral blood lymphocytes. Low expression in kidney, testis, liver, placenta, thymus and bone marrow. Also detected in fetal kidney, liver, lung and braini- pTM: The soluble form derives from the membrane form	PUNECTION. PUDMEd=10085077; Lynch C.N., Wang Y.C., Lund J.K., Chen YW., Leal J.A., Wiley S.R.; Lynch C.N., Wang Y.C., Lund J.K., Chen YW., Leal J.A., Wiley S.R.; Lynch C.N., Wang Y.C., Lund J.K., Chen YW., Leal J.A., Wiley S.R.; "TWEAK induces angiogenesis and profit profit cells."; J. Biol. Chem. 274:8455-8459(1999). -i- FUNCTION: Binds to FN14 and possibly also to TNRFSF12/APO3. Weak inducer of apoptosis in some cell types. Mediates NF-KappaB activation. May promote angiogenesis and the proliferation of endothelial cells.	. for	I.A., AND N-TERMINUS OF and Fetal liver; S. pubMed=9405449; Y., Bourdon P.R., Xu H.                                                                                                                                                                                                                                         A Tregaskes C.A., Young J.R., Burnside J.;
Submitted (JUN-1999) to the EMBL/GenBank/DDBJ databases.
C -!- FUNCTION: Cytokine that binds to TNFRSF5. Mediates B-cell proliferation in the absence of co-stimulus as well as IgE production in the presence of IL-4. Involved in immunoglobulic c class switching (By similarity).
C -!- SUBUNIT: Homotrimer (By similarity).
C -!- SUBCELLULAR LOCATION: Type II membrane protein. Also exists a extracellular soluble form (By similarity).
C -!- PIM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
C -!- SIMILARITY: BELONGS TO THE TUMOR NECROSIS FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29
                              transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TNFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TNFRSF6B/DcR3 modulates its effects (By similarity).
                                                                                                      FUNCTION: Cytokine that binds to TNFRSF6/FAS, a receptor
